DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-3, 8-12, 14, 16 and 18-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Grover (EP 0 218 838).
- 3. A regards to claims 1 and 12, Applicant's attention is directed to figure 1 of Glover, teaching a magnetic resonance imaging apparatus and method, including a means for acquiring radial readout lines of magnetic resonance imaging data; a means for reconstructing a direction of a radial readout line with a displacement of a feature of interest, the coordinating means biasing at least of the acquiring means and the construction means toward a selected relationship between readout magnetic field gradient direction and displacement direction (column 5, line 19 to column 6, line 6; column 7 (detailed description) line 25 to column 8, line 25).
- 4. As regards to claim 20, Applicant's attention is again directed to figure 1 of Glover, teaching a magnetic resonance apparatus, including a sensor measuring a displacement of a feature of interest; a magnetic resonance imaging scanner acquiring radial readout lines of magnetic resonance imaging data; a reconstruction processor to reconstruct the required readout lines into reconstructed image data; and a coordinating processor to coordinate the required readout lines with the determined displacement,

Application/Control Number: 10/595,753

Art Unit: 2831

the coordinating processor biasing the magnetic resonance imaging scanner and the reconstruction processor toward a selected relationship between readout magnetic field gradient direction and the determined displacement of the feature of interest (column 5, line 19 to column 6, line 6; column 7 (detailed description) line 25 to column 8, line 25).

Page 3

- 5. As regards to claims 2-3, 8-11, 14, 16, 18 and 19, Glover further teaches a magnetic resonance apparatus to measure a physiological parameter correlated with displacement of the feature of interest, determining a displacement of the feature of interest and selecting a subset, selecting a direction of the radial readout line, repeating and selecting of a direction of a radial readout line based on the determined displacement, optimizing the order of the set of readout lines to minimize for selected relationship between the gradient field direction and the displacement of the feature of interest (page 1, line 1 to page 3 line 25; page 4, line 5 to 6, line 6;detailed description lag 7 to page 10, line 14; page 26, line 11-17; page 31, line 8 to page 32 line 15).
- 6. Claims 4-7, 13, 15 and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brij B. Shrivastav whose telephone number is 571-272-2250. The examiner can normally be reached on 7 AM to 4 PM.
- 8. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Diego Gutierrez can be reached on 571-272-2245. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

8. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
